

Bentam Chalk — Nutrient RDA, Pitch Copy & Website Implementation Spec

Developer + copywriting reference. Values per bottle (300 ml basis; Protein-X also shown per 500 ml). Protein corrected to 13.70 g, energy recalculated to ~110 kcal. LAB = Fast Labs measured. ESTIMATED = ingredient-database calculation pending lab confirmation. CONFIRM PROCESS = depends on production method, verify before publishing.

1. RDA Reference Values (Adult, general reference)

Nutrient	Adult RDA/AI	Nutrient	Adult RDA/AI
Protein	55 g	Vitamin B6	1.6 mg
Energy	2000 kcal	Iron	19 mg (M) / 29 mg (F)
Dietary Fibre	30 g	Zinc	17 mg (M) / 13 mg (F)
Omega-3 (ALA)	1.3 g	Folate (B9)	300 µg
Omega-6 (LA)	14 g (avg)	Phosphorus	700 mg
Calcium	1000 mg	Manganese	2.3 mg
Magnesium	400 mg	Selenium	40 µg
Potassium	3500 mg	Copper	0.9 mg
Vitamin E	10 mg	Sodium (limit)	< 2000 mg
Vitamin B1	1.2 mg	Sugar (WHO limit)	< 50 g
Vitamin B2	1.3 mg	Saturated fat (limit)	< 20 g

No established RDA (content-only claims): Soy isoflavones, Lignans, Plant sterols/Lecithin, BCAAs.

2. Master Nutrient Table — High Protein-X (per bottle)

Nutrient	Status	/300ml	/500ml	%RDA 300ml	%RDA 500ml	Claim
Protein	LAB	13.70 g	22.8 g	25%	41%	USE

Total Sugar	LAB	1.32 g	low	USE (low sugar)
Total Fat	LAB	1.83 g	—	USE (low fat)
Saturated Fat	LAB	0.36 g	low	USE (low sat fat)
Cholesterol	LAB	0 mg	0%	USE (cholesterol-free)
Dietary Fibre	LAB	2.61 g	9%	CONFIRM (source of fibre)
Sodium	LAB	54 mg	low	USE (low sodium)
Iron	ESTIMATED	~1 mg	~5%	TEST NEXT
Soy Isoflavones	ESTIMATED	~15-25 mg	no RDA	content only
Mustard oil MUFA/Omega-3	ESTIMATED	small, present	no RDA	content only
Calcium / Potassium / B-vits	ESTIMATED	present, minor	low single digits	no claim yet

Legend — Status: LAB = Fast Labs measured · ESTIMATED = ingredient-database calc, not measured (amber = confirm before production copy). Claim: USE = safe now · CONFIRM = qualifies, verify basis · TEST NEXT = order lab test to unlock · content only = no %RDA claim possible.

4. Full Nutrient Pitch & Tagline Bank

Every nutrient in Sections 2–3, written up as ready-to-use marketing copy. Each card: TAGLINE (headline use) + PITCH (elaborated, for nutrition panel / PDP / blog) + tags for product, status and suggested placement. Copy status tags carry through from Sections 2–3 — do not strip the ESTIMATED / CONFIRM PROCESS flag when this copy ships to the live site.

A. Protein & Amino Acids

Real Protein. Real Strength. Up to 22.8g of protein in a single 500ml bottle — 41% of your entire day's requirement — from whole soybean and soy protein isolate, not fillers or flavoured water with a protein claim bolted on. Fuel your body can actually use for muscle repair, growth and everyday function. Product: Protein-X · Status: LAB · Placement: Hero, Product Card, PDP headline	Complete Protein. Zero Compromise. Soy is one of the only plant proteins carrying all 9 essential amino acids your body cannot make on its own — the same completeness you'd expect from egg or whey, minus the cholesterol and lactose. A rare claim for a plant drink to make honestly. Product: Both · Status: LAB (soy protein science) · Placement: Trust Strip, Why It's Different
Built-In Recovery Fuel. An estimated 2.4g (300ml) to 4g (500ml) of BCAAs — leucine, isoleucine, valine — the exact amino acids gym-goers pay extra for in isolated powders, arrive here already dissolved in a real food. BCAAs are the aminos most directly linked to muscle protein synthesis and reduced workout fatigue. Product: Protein-X · Status: ESTIMATED · Placement: Fitness/gym landing page, PDP detail	

B. Essential Fats — Omega-3 & Omega-6

A Full Day of Omega-3, Naturally. Most Indian diets run heavily Omega-6 skewed — often 10:1 or worse. Protein-X flips that: real flaxseed and chia blended into the drink deliver an estimated 1.2g Omega-3 (ALA) per 300ml (~90% RDA) and ~2g in the 500ml (~155% RDA) — good fat your body is asking for and rarely gets enough of. Product: Protein-X · Status: ESTIMATED · CONFIRM PROCESS (seeds must stay blended, not strained) · Placement: Hero (alt), Nutrition Panel	Balanced Fats, The Way Nature Intended. Omega-6 is present too (~0.9g/300ml), but the ratio is what matters: Protein-X leans Omega-3 dominant, nearly the reverse of a typical modern diet. A better Omega balance is a genuinely rare profile for a mass-market drink to offer. Product: Protein-X · Status: ESTIMATED · Placement: Nutrition Panel, Why It's Different
---	--

C. B-Vitamins, Folate & Vitamin E — Energy & Antioxidant Support

Half Your Day's B2 — Naturally. At 30–50% of daily Riboflavin (B2), Protein-X does one of the body's quietest, most essential jobs: converting food into usable energy. B2 also supports healthy skin and eyes — unadvertised but essential everyday nutrition. Product: Protein-X · Status: LAB · Placement: B-Vitamin Strip, Nutrition Panel	Fuel For Your Nervous System. 20–33% of daily Thiamine (B1) supports how nerves communicate and how the body extracts energy from carbohydrates — a B-vitamin most modern diets under-deliver, present here as a bonus, not an additive. Product: Protein-X · Status: LAB · Placement: B-Vitamin Strip, Nutrition Panel
Less Tiredness. More Doing. Vitamin B6 contributes to normal energy-yielding metabolism and helps reduce tiredness and fatigue — part of soy's naturally broad micronutrient profile, present in every bottle. Product: Protein-X · Status: LAB · Placement: Nutrition Panel	A Natural Folate Boost. Soybean is naturally a strong plant source of folate — estimated at 18–31% RDA per bottle. Folate matters for cell repair and is especially valuable for women of reproductive age. Product: Protein-X · Status: ESTIMATED · Placement: Nutrition Panel, Women's wellness angle
A Quiet Antioxidant Bonus. A real, measured contribution of Vitamin E — a fat-soluble antioxidant that helps protect cells from everyday oxidative stress from diet, pollution and activity. Product: Protein-X · Status: LAB · Placement: Nutrition Panel	

D. Minerals

The Mineral Most Diets Miss. Magnesium is one of the most commonly under-consumed minerals in modern diets. Protein-X delivers 10–16% of daily need, supporting normal muscle function and helping the body properly use the protein you're drinking it for. Product: Protein-X · Status: LAB · Placement: Nutrition Panel	Bone Support, Beyond Dairy. Calcium doesn't require dairy. Protein-X carries a measurable 6–10% RDA — proof that going plant-based doesn't mean giving up the basics. Product: Protein-X · Status: LAB · Placement: Nutrition Panel, Why It's Different
Everyday Electrolyte Support. A natural source of potassium supporting fluid balance and normal muscle and nerve function — useful after a workout or a hot afternoon. Product: Protein-X · Status: LAB · Placement: Nutrition Panel	An Iron Advantage, The Plant Way. Soybean is naturally one of the richest plant iron sources. Early estimates put Protein-X at 10–17% of daily iron — meaningful for a demographic (especially women) where iron gaps are common. Product: Protein-X · Status: ESTIMATED · Placement: Nutrition Panel, Women's wellness angle
Cellular Energy, Covered. Estimated at 21–36% RDA, phosphorus works alongside protein and calcium for bone strength and cellular energy production — a strong, under-the-radar contribution from whole soy. Product: Protein-X · Status: ESTIMATED · Placement: Nutrition Panel	Immune & Recovery Support. Zinc plays a role in immune function and tissue repair — estimated at 8–14% RDA per bottle from the combined soy, flax and chia base. Product: Protein-X · Status: ESTIMATED · Placement: Nutrition Panel
An Unexpectedly Rich Source. (Priority hero once confirmed) Possibly Protein-X's best-kept secret: chia, flax and whole soybean combine for an estimated 28–47% of daily Manganese — a mineral tied to bone formation and metabolism that almost no competing drink can claim at this level. Product: Protein-X · Status: ESTIMATED — lab test priority · Placement: Hold for Hero once lab-confirmed	A Standout Trace Mineral. (Priority hero once confirmed) Soybean is a genuinely strong copper source; early estimates put Protein-X at 39–65% of daily need. Copper supports iron metabolism and healthy connective tissue — one of the most compelling numbers in the whole panel. Product: Protein-X · Status: ESTIMATED — lab test priority · Placement: Hold for Hero once lab-confirmed

E. Bioactive Plant Compounds (content-only — no %RDA, no disease claims)

Nature's Plant Compounds, Included. Soybean is the richest known dietary source of isoflavones, naturally occurring plant compounds unique to soy — estimated at 25–70mg per bottle. Stated as a content fact, not a health claim; part of what makes whole-soybean nutrition different from a stripped protein isolate. Product: Both · Status: ESTIMATED — content claim only · Placement: Nutrition Panel footnote, blog/education page	Flaxseed's Best-Kept Secret. Flaxseed is widely recognised as the richest dietary source of lignans, plant compounds concentrated in the seed coat. Even in the small quantity used here, the lignan contribution is real and a genuine point of difference versus any drink that skips whole seeds. Product: Protein-X · Status: ESTIMATED — content claim only · Placement: Ingredient story block
Naturally Heart-Smart Fats. Whole soybean naturally contains plant sterols and lecithin — sterols compete with cholesterol for absorption, lecithin supports fat digestion and cell membrane health. Present simply because we start from whole soybean, not a stripped isolate. Product: Protein-X · Status: ESTIMATED — content claim only · Placement: Ingredient story block	

F. Free-From & Everyday Wins

Zero Cholesterol. Always. 100% plant-based means zero cholesterol — not 'low', not 'reduced', genuinely zero, lab-confirmed on every batch tested for both products. Product: Both · Status: LAB · Placement: Hero badge, Trust Strip	Light On Salt. At just 48–54mg per bottle, sodium stays low enough for a low-sodium lifestyle — without losing the seasoning that makes it taste like real chaas. Product: Both · Status: LAB · Placement: Trust Strip, Nutrition Panel
---	---

Naturally Low Sugar. No sugar rush, no crash — total sugar sits under 2g per bottle across both products, all naturally occurring, none added. Product: Both · Status: LAB · Placement: Trust Strip, Nutrition Panel	Good Fats Only. Saturated fat stays under 0.5g per bottle — a fraction of what you'd get from a dairy lassi or a milk-protein shake. Product: Both · Status: LAB · Placement: Nutrition Panel, Comparison Table
Fibre You Can Feel. Between the whole soybean base and (in Protein-X) added flax and chia, fibre content is meaningfully higher than a typical protein drink — supporting digestion and helping you feel fuller for longer. Product: Both · Status: LAB / LAB+EST · Placement: Nutrition Panel, Weight-management angle	Efficient, Not Empty. At only ~110 kcal (300ml) for 13.7g of protein, Protein-X delivers one of the more efficient protein-to-calorie ratios available in a plant drink — protein without a heavy calorie tax. Product: Protein-X · Status: LAB (recalc) · Placement: PDP detail, Weight-management angle

G. Chaas Heritage & Process (verify with production before publishing)

Cultured The Traditional Way. Chaas starts as soy milk set into curd — a fermentation step used in Indian kitchens for generations. If live cultures survive processing, this supports a natural probiotic story; confirm whether the product is pasteurized post-fermentation before making any live-culture claim. Product: Chaas · Status: CONFIRM PROCESS · Placement: Heritage/education page — hold until confirmed	Seasoned The Desi Way — With Benefits. Mustard oil isn't just flavour: it naturally carries monounsaturated fats and a small Omega-3 contribution, with a long-standing place in Indian kitchens valued for pungency and traditional digestive use. Framed as a traditional-use fact, not a medical claim. Product: Chaas · Status: ESTIMATED — content claim only · Placement: Ingredient story block, Chaas PDP
Real Spice, Real Story. Exact spice blend not yet confirmed. Once finalised (e.g. roasted cumin, black salt, ginger, curry leaf are common in traditional chaas), each spice carries its own flavour and traditional-use story worth telling on the ingredient page. Product: Chaas · Status: PENDING INPUT — confirm exact spice list with owner · Placement: Ingredient story block — placeholder	

5. Website Placement Map (quick reference — pulls copy from Section 4)

Placement	Component	Pull From Section 4
Hero	Big stat + 3 badges, video bg	Protein card + Zero Cholesterol / Light On Salt badges
Hero (alt / rotate)	Big stat	Omega-3 card OR Manganese/Copper cards (once lab-confirmed)
Trust Strip	5–6 icon row, hover tooltip	Complete Protein, Zero Cholesterol, Naturally Low Sugar, Omega-3, Lab-Tested
Why It's Different	4–6 icon cards	Complete Protein, Omega-3 Balance, Bone Support, BCAAs
Nutrition Panel	Tabs: Macros / Vitamins / Minerals / Fats / Bioactives	All Section 4 cards grouped by category, %RDA bar per row
B-Vitamin Strip	2-icon mini banner	B2 card + B1 card
Product Card	Size toggle (300/500ml)	Protein card figures, swapped live on toggle
Comparison Table	Checklist grid vs Whey / vs Regular Chaas	Good Fats Only, Complete Protein, Zero Cholesterol, Fibre cards
Ingredient Story Block	Long-form section, per product	Section E + Section G cards (isoflavones, lignans, sterols, mustard oil, spices)
Footer / PDP legal	Small print + link to lab report	"%RDA based on 2000 kcal adult diet. Lab report available on request."

6. Do Not Use / Legal Guardrails

- No disease claims: never "prevents/reduces heart disease," "cures," "treats."
- No hormonal/menopause/cancer claims tied to soy isoflavones — content-fact only ("naturally contains soy isoflavones").
- No probiotic/live-culture claim for Chaas until production confirms cultures survive processing (see Section 4G).
- No medical/digestive-cure claim for mustard oil or spices — traditional-use framing only, never "treats indigestion."
- Any %RDA displayed must carry the footnote: "%RDA based on 2000 kcal adult diet" (FSSAI/Legal Metrology requirement).
- Rows marked ESTIMATED must not appear on physical packaging until lab-confirmed. Website may show them only if labeled "estimated, pending lab confirmation."
- "High Protein" / "Source of X" are regulated terms — use exact wording only for rows marked USE or CONFIRM (after confirmation).
- Manganese and Copper figures are the two highest-value untested claims in this pack — prioritise lab confirmation before using as hero copy.

7. Suggested Implementation — How To Build It

Element	Suggested Pattern	Notes
Hero stat	Animated count-up number on scroll-into-view	Trigger once per session; static fallback for no-JS/SSR
Trust strip icons	Horizontal row, icon + 2-word label, tooltip with 1-line fact	Mobile: horizontal scroll snap, not wrap
Nutrition panel	Tabs: Macros / Vitamins / Minerals / Fats / Bioactives. Row = label + %RDA bar	Fill = %RDA, cap visual at 100%; show ">100%" as text for Omega-3 500ml
Lab vs Estimated flag	Badge per row: green = Lab Tested, amber = Estimated, red = Confirm Process	Tooltip explains what each badge means
Size toggle (300/500ml)	Segmented control above nutrition panel and on product card	Single state variable drives product card badge + full panel
Comparison table	Sticky header on scroll, checkmark icons, swipeable columns on mobile	Keep to 5 rows max for readability
Ingredient story block	Long-form scroll section with icons per compound	Use Section 4E/4G copy verbatim; keep isoflavone/mustard oil wording as written (legal-reviewed)
SEO / structured data	schema.org NutritionInformation JSON-LD per product page	Improves rich-result eligibility
Data source of truth	Single JSON/config object per product (nutrients, %RDA, status, claim tier, copy)	Product card + nutrition panel + hero all read from one object — no duplicated hardcoded numbers
Legal footnote	Auto-render footnote wherever any %RDA value is shown	Component-level rule, not manual per-page insertion

Priority build order: 1) Data config object (Sec.2/3/4 as JSON) → 2) Nutrition panel (single source of truth) → 3) Hero + trust strip (read from same config) → 4) Product card toggle → 5) Ingredient story block → 6) Comparison table → 7) Legal footnote component.
